WORKWELL'S FCE BETTER BY DESIGN

Legally Defensible | Medically Sound | Operationally Efficient | Analytically Based

In March 2009 and March/ May 2010 WorkWell trained multiple South African OTs in the FCE. WorkWell is returning to hold another session in the fall of 2010 and is offering the FCE program for a significantly reduced rate. The Rand's current strength against the US Dollar provides an effective extra discount.

When: Fall 2010. 2-day training to be held in South Africa
Where: Location to be determined based on attending facilities
Total cost: \$5,900 USD plus faculty travel and equipment costs

What the \$5900 USD includes:

- FCE copyrighted materials procedure manual
- 2 days training for 1 therapist. Additional therapists from the same practice additional \$700/therapist
- CD with word processing documentation
- Marketing Tool Kit
- Internet based FCE and related training on such Internet Tools
- If using Internet format, \$10 per FCE
- 1st year WS Network membership for clinical and marketing assistance

Faculty travel expenses will be split amongst the practices participating in the training session. This would include airfare, food and lodging for 1 faculty member.

Payment is as follows:
- 25% deposit immediately
- 25% at 30 days
- 50% at 60 days

WorkWell Systems

WorkWell Systems' proprietary decision support tools, global network of health professionals and international research team offer an integrated approach to injury prevention and management. WorkWell's integrated programs are operationally efficient, legally defensible, medically sound and analytically based. Becoming a member of WorkWell's Quality Provider Network (WQP) provides professionals with certified work injury management and prevention skills. The strength of an international network of rehabilitation specialists provides a professional support system second to none.

WorkWell Systems Functional Capacity Evaluation V.2

WorkWell's Functional Capacity Evaluation is a comprehensive functional test designed to objectively measure the maximum safe functional abilities of a client- across a broad range of physical capabilities for recommendations for Return to Work and Activities of Daily Living. The test includes detailed strength/motion/balance testing and performance of functional activities such as lifting/carrying, walking, sitting, standing, repetitive squatting, forward bend, overhead reach, push/pull, ladder climb, kneel/crawl, crouch, hand coordination, etc.

Created for Experts by Experts

The FCE is based on over 20 years of experience working with healthcare professionals and employers in the development and implementation of work injury prevention and disability management systems. WorkWell's proprietary programs, protocols and online tools have been developed using both clinical and statistical research resulting in the most scientifically accurate and outcome-oriented results available. WorkWell providers are trained and supported by professionals who are experts in the field.

Kinesiophysical Method

The WS FCE uses a unique approach to physical examination by allowing the worker to test for maximum objective strength without fear of injury. In this kinesiophysical method of testing it is the therapists skilled in musculoskeletal function -not the worker- who identifies precise physical and functional abilities. The therapist observes muscle function, movement patterns, physiological changes, safety and worker behavior in one evaluation; correlates physical finding with functional limitation and provides specific solutions regarding when and in what capacity that worker can safely return to work.

FUNCTIONAL CAPACITY EVALUATION V.2
